

Introduction to Power Automate

Sample manual - first two chapters

Wise Owl
Training

TABLE OF CONTENTS (1 of 4)

1	GETTING STARTED	Page
1.1	What is Power Automate?	6
1.2	Power Automate vs Power Automate Desktop	7
1.3	Licensing Requirements	8
1.4	Logging on to Power Automate	9
1.5	Environments and Flows	10
	<i>Choosing an Environment</i>	10
	<i>Listing Flows</i>	10

2	WORKING WITH FLOWS	Page
2.1	Creating Flows	11
	<i>Types of Flow</i>	12
	<i>Adding Steps (Actions)</i>	12
	<i>Configuring an Action</i>	13
	<i>Expanding and Collapsing the Action Bar</i>	13
	<i>Adding Dynamic Content</i>	13
	<i>Finding Parts of a Flow</i>	15
	<i>Saving your Flow</i>	15
	<i>Exiting Flows</i>	15
2.2	Testing and Running Flows	16
	<i>Testing Flows</i>	16
	<i>Re-testing Flows</i>	17
	<i>Running Flows</i>	17
	<i>Checking Flows</i>	17
2.3	Viewing and Editing Flows	18
2.4	Improving Flow Readability	19
	<i>Renaming Actions</i>	19
	<i>Adding Notes</i>	20
2.5	Working with Flows	21
	<i>Viewing Actions' Code</i>	21
	<i>Disabling Flows (but not Actions)</i>	21
	<i>Copying Actions</i>	22
	<i>Copying Flows</i>	22
	<i>Deleting Flows</i>	23

3	THE CLASSIC FLOW DESIGNER	Page
3.1	The Two Flow Designers	24
3.2	Switching between Designers	25
3.3	Using the Classic Flow Designer	26
	<i>Adding Actions</i>	26
	<i>Deleting and Renaming Actions</i>	27
	<i>Adding Notes</i>	27
3.4	Features not Carried Through	28
	<i>When you Need the Classic Flow Designer</i>	28
	<i>Undo and Redo</i>	28
	<i>Comments</i>	29
	<i>Format by Example</i>	29

4	TRIGGERS AND TEMPLATES	Page
4.1	Our Example Automated (Triggered) Flow	30
4.2	Creating Automated Flows from Scratch	31
4.3	Creating Automated Flows using Templates	32
	<i>Finding the Right Template</i>	32
	<i>Tweaking your Template</i>	33
4.4	Creating Flows using Copilot	34

5	TESTING AND DEBUGGING	Page
5.1	Testing Flows	35
5.2	Inputs and Outputs	36
	<i>Capturing Outputs - the Compose Action</i>	36
	<i>Seeing Inputs and Outputs</i>	37
	<i>Raw Inputs and Outputs</i>	37
5.3	Viewing JSON Code	38
5.4	Writing to Text Files	39
5.5	Dealing with Flow Failures	40
	<i>Viewing Error Messages</i>	40
	<i>Showing Full Error Details</i>	41

TABLE OF CONTENTS (2 of 4)

6	PROGRAMMING CONCEPTS	Page
6.1	Overview	42
	<i>Our Example</i>	42
6.2	Simple Variables	43
	<i>Initialising Variables</i>	43
	<i>The Types of Variables</i>	44
	<i>Variable Actions</i>	44
	<i>Referencing Variables in Flows</i>	45
	<i>Debugging Variables</i>	45
6.3	Array Variables	46
	<i>Outline Flow Actions for our Example</i>	46
	<i>Getting our List of Files - OneDrive</i>	47
	<i>Getting our List of Files – SharePoint</i>	48
6.4	Using Scope to Group Actions	49
	<i>Adding a Scope Action</i>	49
	<i>Tidying Things Up</i>	50
6.5	Parallel Branches	51
	<i>Creating Parallel Branches</i>	51
	<i>Reuniting Parallel Branches in the New Flow Designer</i>	52
	<i>Reuniting Parallel Branches in the Old Flow Designer</i>	52
6.6	Basic Expressions	52
6.7	Single Conditions - If	54
	<i>Setting the Condition</i>	54
	<i>Reacting to Condition Results</i>	54
	<i>Testing Conditions</i>	54
	<i>Terminating Flows Early</i>	55
	<i>The Terminate Action</i>	56
6.8	Multiple Conditions – Switch	57
	<i>Finding the Difference between our File Counts</i>	57
	<i>Creating a Switch Action</i>	57
	<i>Configuring your Switch Action</i>	58

7	WORKING WITH ARRAYS	Page
7.1	Creating Arrays	59
	<i>Setting Array Variables Manually</i>	59
	<i>Creating Arrays with Named Properties</i>	60
	<i>Creating Arrays using Expressions</i>	60
7.2	Referring to Items within an Array	61
	<i>An Example using a List of Files</i>	61
	<i>Getting Values by their Key</i>	62
7.3	Mapping or Reshaping Arrays using Select	63
	<i>Collapsing Arrays to One Value</i>	63
	<i>Returning Multiple Columns with Renaming</i>	64
7.4	Intersection and Union	65
	<i>Overview of Final Answer</i>	65
	<i>The Union and Intersect Expressions</i>	66

8	GETTING DATA	Page
8.1	Sources Included in this Chapter	67
8.2	Getting Data from Excel	68
	<i>The Need for a Table</i>	68
	<i>Creating a Table</i>	68
	<i>Getting Data from an Excel Table</i>	69
	<i>Bonus: Listing Worksheets and Tables</i>	70
8.3	Getting Data from a SharePoint List	71
	<i>Getting SharePoint List Rows</i>	71
	<i>Showing the Correct Column Names</i>	72
8.4	Listing Files/Folders from OneDrive	73
8.5	Listing Emails from Outlook	74

9	ODATA	Page
9.1	What is OData?	75
9.2	The Need for OData	76
9.3	Using OData	77
	<i>Applying OData when Getting Data</i>	77
	<i>Sorting using OData</i>	77
	<i>Filtering using OData</i>	78
	<i>Combining Filters</i>	79
	<i>Testing for Null Values</i>	79
	<i>Filtering Dates</i>	79
9.4	Issues with Different Data Sources	80
	<i>Excel: Spaces in Column Names</i>	80
	<i>SharePoint: Lookup Columns</i>	80
9.5	Dynamic Filters	81
9.6	Experimental OData Features	82

TABLE OF CONTENTS (3 of 4)

10	HTML TABLES	Page
10.1	Overview	83
10.2	Basic HTML Tables	84
10.3	Emailing HTML Tables	85
10.4	Choosing HTML Table Columns	86
10.5	Formatting HTML Tables	87

11	APPLY TO EACH	Page
11.1	Our Example	88
11.2	Adding Apply to Each Manually	89
	<i>Getting an Array to Loop Over</i>	89
	<i>Creating an Apply to Each Action</i>	89
	<i>The Current Item</i>	90
	<i>Testing Apply to Each Loops</i>	90
11.3	Adding Apply to Each Automatically	91
11.4	Referring to the Current Item's Contents	92
	<i>Copying Visible Fields to Expressions</i>	92
	<i>Making Pasted Expressions Valid</i>	92
	<i>Creating your own Expression for a Row Item</i>	93
	<i>Using the Simpler Item() Syntax</i>	93
11.5	Applying Conditions within Loops	94
	<i>The Outline of our Flow</i>	94
	<i>Creating the Condition</i>	95
	<i>Building the Array of Film Titles</i>	95

12	EXPRESSIONS	Page
12.1	Overview	96
12.2	Text Functions	97
	<i>The Main Text Functions</i>	97
12.3	Text Functions Case Study	98
	<i>The Overall Flow</i>	98
	<i>The Variables Used</i>	99
	<i>Setting the List of Words</i>	99
	<i>Example Flow - Apply to Each Action</i>	99
	<i>Testing for Word Inclusion</i>	100
	<i>Adding the Found and Not Found Words</i>	100
	<i>Example Flow – Showing the Results</i>	100
12.4	Number Functions	101
	<i>Basic Mathematical Operator Functions</i>	101
	<i>Other Mathematical Functions</i>	101
	<i>Conversion Functions</i>	101
12.5	Date Functions	102
	<i>Date Formats and Timestamps</i>	102
	<i>Getting Dates</i>	102
	<i>Manipulating Dates</i>	103
	<i>Getting Parts of Dates</i>	103
12.6	Collection/Array Functions	104
	<i>Inspection Functions</i>	104
	<i>Joining and Splitting</i>	104
	<i>Picking Items</i>	105
	<i>Ordering Arrays</i>	105
	<i>Set Operations</i>	105
12.7	Comparison Functions	106
	<i>Conditional IF Function</i>	106
	<i>Testing for Equality or Inequality</i>	106
	<i>Combining Conditions</i>	106

13	ERROR HANDLING	Page
13.1	Try / Catch / Finally Blocks	107
13.2	Configuring Run After Actions	108
13.3	Implementing Error Handling – a Case Study	109
	<i>Our Example Error</i>	109
	<i>Summary of Proposed Flow</i>	110
	<i>Step 1 – Getting the Results</i>	111
	<i>Step 2 – Filtering the Results Array</i>	112
	<i>Step 3 – Picking out the Columns of Interest</i>	112
	<i>Step 4 – Presenting an HTML Table</i>	113
	<i>Step 5 – Sending a Notification Email</i>	113
	<i>Step 6 – Creating a Link back to our Flow</i>	114

TABLE OF CONTENTS (4 of 4)

14	APPROVALS	Page
14.1	Our Example	115
14.2	Building a Flow Diagram	116
14.3	How the Approval Process Works	117
14.4	Building the Approval Flow	118
	<i>Step 1 – Creating the Trigger</i>	118
	<i>Step 2 – Request Approval</i>	118
	<i>Step 3 – Adding a Condition</i>	119
	<i>Step 4 – Processing Rejections</i>	120
	<i>Step 5 – Processing Approvals (Part One)</i>	121
	<i>Step 6 – Processing Approvals (Part 2)</i>	122
14.5	Managing Approvals	123
	<i>Managing Approval Expiry</i>	123
14.6	Custom Responses	124
	<i>Choosing to Set Custom Responses</i>	124
	<i>Testing the Different Responses</i>	125

15	FORMS	Page
15.1	Overview of Forms	126
	<i>Creating Forms</i>	127
15.2	Adding Questions	128
	<i>The Types of Question</i>	128
	<i>Sections</i>	129
	<i>Letting Users Upload Files</i>	130

15.3	Testing and Distributing your Form	132
	<i>Previewing a Form</i>	132
	<i>Changing Form Settings</i>	132
	<i>Saving your Form</i>	133
	<i>Distributing your Form via a Web Link</i>	133
	<i>Generating QR Codes and Embed Codes</i>	134
15.4	Viewing Responses	135
15.5	Other Things to Try with Forms	136
	<i>Using Other Apps such as Excel</i>	136
	<i>Applying Styles</i>	136
15.6	Responding to Form Events in a Flow	137
	<i>Creating the Trigger</i>	137
	<i>Getting the Form Response</i>	138
	<i>Showing Individual Answers</i>	138

16	SHAREPOINT LISTS	Page
16.1	About SharePoint Lists	139
16.2	Working with SharePoint Lists	140
	<i>Creating a New List</i>	140
	<i>Renaming the Title Column</i>	141
	<i>Adding/Editing List Data</i>	141
	<i>Creating Choice and Lookup Columns</i>	142
16.3	Internal SharePoint List Column Names	143
	<i>Finding Column Names in Power Automate</i>	143
	<i>Finding Column Names in SharePoint</i>	143
16.4	Referencing Choice and Lookup Columns	144

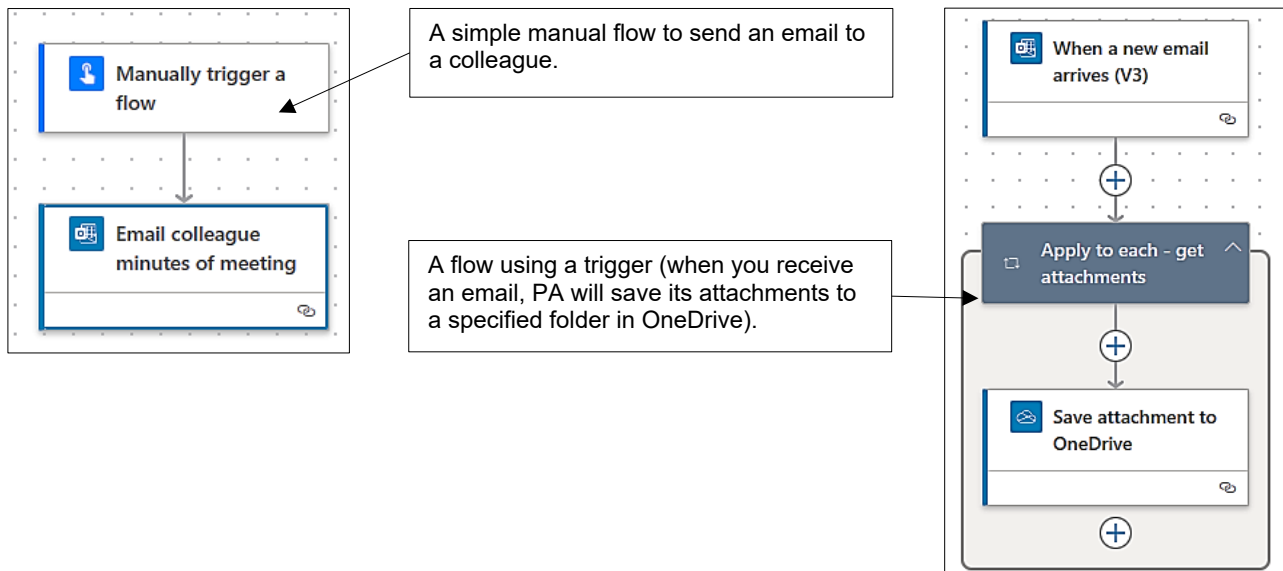

17	POWER BI DESKTOP FLOWS	Page
17.1	Our Example	145
17.2	Limitations of Power BI Flows	146
17.3	Creating a Power Automate Button	147
	<i>Step 1 – Create a Report in the Right Environment</i>	147
	<i>Step 2 – Creating the Button</i>	147
	<i>Step 3 – Assigning Data Fields</i>	148
	<i>Step 4 – Start Editing your Flow</i>	148
	<i>Step 5 – Add Actions (and Data)</i>	149
	<i>Step 6 – Saving and Applying your Flow</i>	150
	<i>Step 6 – Formatting your Button</i>	150
	<i>Step 7 – Test your Button</i>	150
17.4	Editing Power BI Flows in Power Automate	151

18	TEAMS	Page
18.1	Teams Triggers and Actions	152
18.2	Our Example – Listening for Keywords	153
	<i>What the Flow will Do</i>	153
	<i>Top-Level Flow Diagram</i>	154
18.3	Creating our Example Flow	155
	<i>Step 1 - Setting the Trigger</i>	155
	<i>Step 2 - Getting the Keyword Message's Details</i>	156
	<i>Step 3 – Posting the Notification Message</i>	157
18.4	Testing our Flow	158

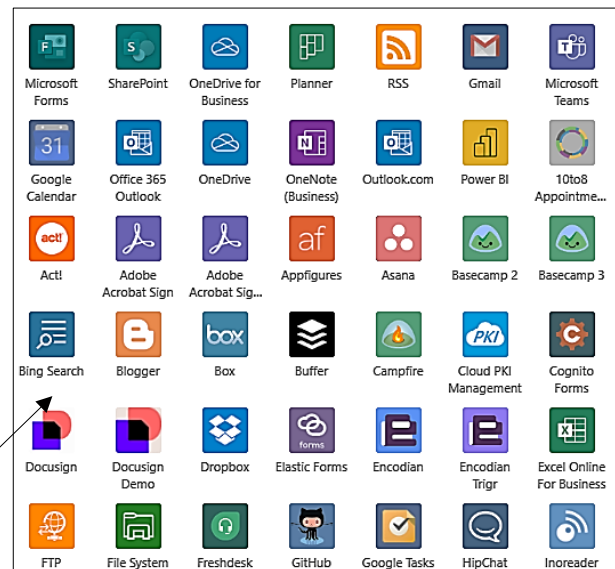

CHAPTER 1 - GETTING STARTED

1.1 What is Power Automate?

Power Automate (PA) used to be called *Microsoft Flow* (Microsoft renamed it in 2019). PA allows you to create *flows* (series of saved instructions) online:

Flows can connect to literally hundreds of cloud-based services – here is a small sample:

Just a few of the many connectors that you can use to link to online services (Microsoft announced that this had reached 1,000 in May 2023, at which point Wise Owl stopped counting).

If you commit to using Power Automate, you are trusting your data, business processes and probably career to Microsoft and the Internet: if your web connection should happen to go down or Microsoft's servers fail, there won't be much that you can do!

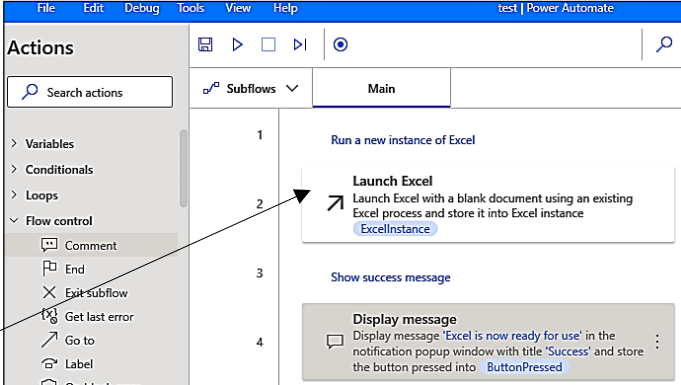

1.2 Power Automate vs Power Automate Desktop

Microsoft (confusingly, if typically) market two software products whose names include **Power Automate**:

Software	Runs in	What it does	Typical use cases
<i>Power Automate</i>	The cloud	Automates a series (or <i>flow</i>) of instructions to run on Microsoft's servers, under your account.	Collating the results of an online survey, emailing notifications when someone posts a comment in Teams, capturing social media updates in an online database.
<i>Power Automate Desktop</i>	Your desktop	Automates a series (or <i>flow</i>) of instructions to manipulate data on your own computer.	Collating data in Excel workbooks, logging attachments sent in emails, submitting website forms, running backup routines.

Here's what a *Power Automate Desktop* flow looks like:

This flow starts an Excel application and then announces that it's ready for use.

Power Automate and Power Automate Desktop were written by different companies (Microsoft bought *SoftMotive*, authors of Power Automate Desktop, in May 2020) and are different products.

Confusingly, while Power Automate Desktop runs on your desktop it too stores its flows in the cloud (in your online Microsoft account). You can run Power Automate Desktop flows from Power Automate, but the converse isn't true.

1.3 Licensing Requirements

Most users of Power Automate will begin with an Office 365 licence. This allows you to do the following:

Capability	With an Office 365 licence you can ...
<i>Run flows</i>	... create and run automated, scheduled and manually triggered flows (that is, most of the flows you are likely to want to run).
<i>Use standard connectors</i>	Use any of the connectors described as <i>Standard</i> by Microsoft. These include Azure Active Directory, Dropbox, Excel online, GitHub, Gmail, Google apps, LinkedIn, Microsoft Forms, Office 365, Outlook, Pinterest, Power Apps and Power BI, Slack, SharePoint, Teams, WordPress and YouTube.
<i>2,000 platform requests per day</i>	During an initial transition period (lasting 6 months or more), you will be allowed up to 10,000 requests per day. The limit is applied on a rolling 24-hour basis. If you exceed your limit you will need to go to another plan (see below).

Here are some of the main things NOT included in this licence:

What	Notes
<i>Premium connectors</i>	To connect to connectors designated as premium by Microsoft, you will need any standalone plan (that is, anything except an Office 365 licence). Premium connectors include ArcGIS, most Azure services, most Dynamics service (for which you can buy a specialist licence), Map Pro, Microsoft Dataverse, MySQL, Oracle, Ordnance Survey Places, Salesforce, SAP, Stripe, Word Online and Zoom Meetings.
<i>Business process flows</i>	For example, you can create a business process flow to ensure that everyone in an organisation follows the same steps every time they handle a customer request. This courseware doesn't consider business process flows, and neither (Wise Owl suspect) will most customers.
<i>Custom connectors</i>	If you can't find a connector for your service, you can create your own with a custom API wrapper.
<i>On premises gateways</i>	These let you build a bridge between a Microsoft cloud service such as Power Automate and a data source in your organisation (such as a SQL Server database).
<i>Robotic process automation</i>	This allows you to build a flow to mimic the keyboard actions and mouse movements of a human user (for example, to fill in a website form), usually using Power Automate Desktop.
<i>AI builder capacity</i>	You can use AI to build and train AI models to make predictions based on your data. The AI builder has its own licensing rules!

To use premium or custom connectors or on-premises gateways you will probably need to buy one or more separate per-flow or per-user Power Automate licence plans.

If there's not enough detail in this section, you can always search for the phrase "Microsoft Power Apps, Microsoft Power Automate and Microsoft Power Virtual Agents Licensing Guide" and download the 34-page PDF this leads to.

1.4 Logging on to Power Automate

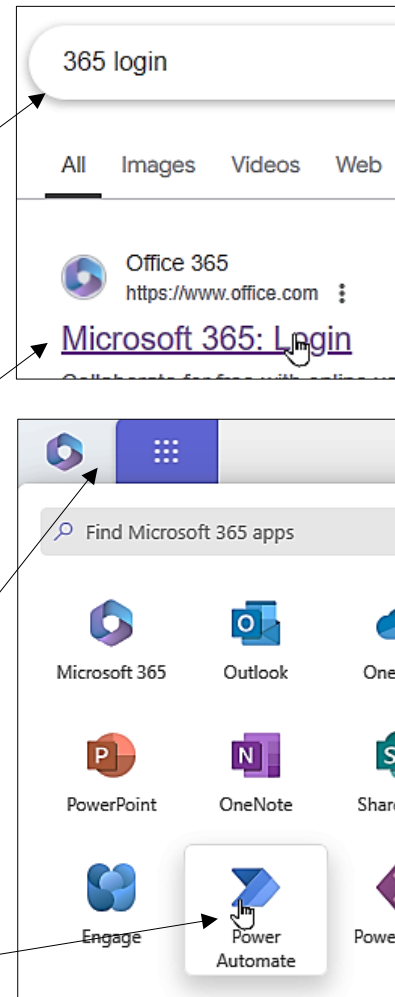

If you are using a 365 licence to access Power Automate, one reliable way to log in is via the 365 home page:

a) Type in the phrase **365 login** into your favourite search engine.

b) Choose to go to the 365 log-in page (although this says **Office**, officially Microsoft's suite of productivity software is now just called 365).

c) Click on this icon in the top left corner (Microsoft call it the *waffle*).

d) Choose to run Power Automate: it will open in a new window.

*Alternatively, just visiting the website **powerautomate.com** also seems to work, although after the website loads a longer URL may appear in your browser's address bar.*

1.5 Environments and Flows

Before listing flows you (or someone else) has created in Power Automate it's vital to make sure you're in the right *environment*.

Choosing an Environment

You can think of environments as different folders in your little bit of the Microsoft cloud. Here's how to change your environment:

Click on this area at the top right corner of Power Automate to see (and change) your environments.

Often your organisation will have one environment for development and one production environment, although here this training account only has access to one environment, so there's nothing to choose.

Each environment sits on its own tenant (think of this as a space you've leased from Microsoft on some central server). To move a flow that you've created from one environment (tenant) to another is a non-trivial process: you have to export it from the first environment and then import it into the second.

Listing Flows

Once you've chosen your environment, you can see the flows it contains:

Click on this menu option on the left-hand side ...

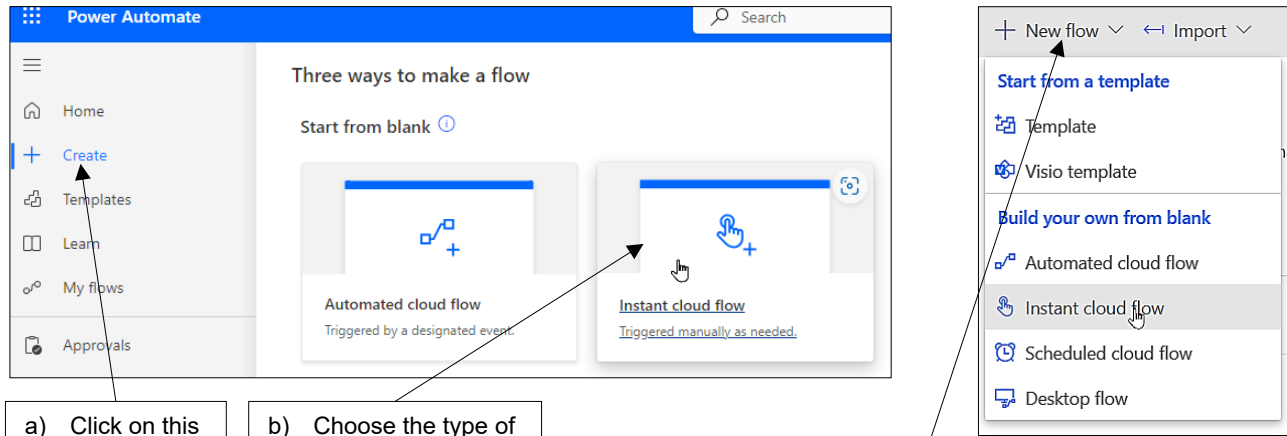

... to see the cloud flows or desktop flows that you've created (or the flows colleagues have shared with you).

CHAPTER 2 - WORKING WITH FLOWS

2.1 Creating Flows

Follow these steps to create a new flow:

The screenshot shows the Power Automate interface. On the left is a navigation pane with 'Create' highlighted. The main area shows 'Three ways to make a flow' with 'Start from blank' selected. Two options are visible: 'Automated cloud flow' and 'Instant cloud flow'. A dropdown menu is open for 'New flow', showing options like 'Start from a template', 'Build your own from blank', 'Automated cloud flow', 'Instant cloud flow', 'Scheduled cloud flow', and 'Desktop flow'. 'Instant cloud flow' is selected.

a) Click on this menu to create a new flow.

b) Choose the type of flow to create (see notes below for what each means).

Alternatively, click on the arrow next to the **New flow** button when listing your flows, and choose which one you want to create.

c) Give your flow a name. Avoid punctuation: although you can create flows whose names include characters like `[]`, they will crash when you try to run them!

d) For the examples in this chapter the only way to run our flows will be manually.

Flow name
Simple flow to send email

Choose how to trigger this flow *

- ☒ Manually trigger a flow
Flow button for mobile
- ☐ When Power Apps calls a flow (V2)

The 4 main types of flow that you can create are shown overleaf.

Types of Flow

PA lists 4 main types of flow, but the first two are the ones which most people will choose:

Type of flow	Description
<i>Automated cloud flow</i>	Any flow which begins when something happens. Triggers can include comments being added to Teams discussions, emails being received or items being added to SharePoint lists (to choose just 3 examples).
<i>Instant cloud flow</i>	When you're testing a flow (or learning PA) this is the best flow type to choose, since you can test it in isolation without having to trigger an event first.
<i>Scheduled cloud flow</i>	When you create a scheduled flow you'll be asked to say when it should run (every week at 10am, for example, or every 10 minutes throughout the day).
<i>Desktop flow</i>	This will launch Power Automate Desktop, the subject of a different Wise Owl training course (and manual!).

*The easiest thing to do, Wise Owl have found, is to create either an automated or instant cloud flow, but then click on the **Skip** button to miss out the stage where you choose the initial trigger. This will bring up a blank flow, and you can then choose which trigger you want to use more easily.*

Adding Steps (Actions)

You can add actions to your flow as follows:

To insert a new step click on the  sign between two steps, then choose to add an action ...

... or click on this button to add a new action to the bottom of your flow.

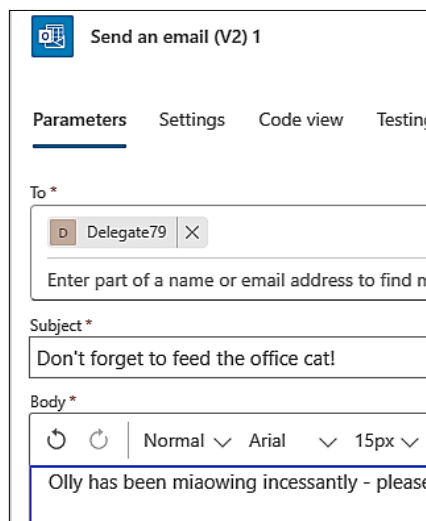

Configuring an Action

Here's how to say what any added action should do:

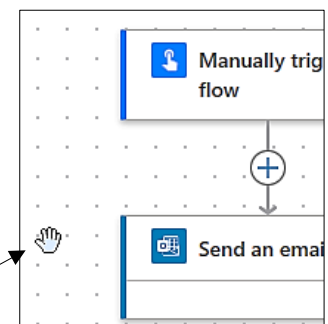

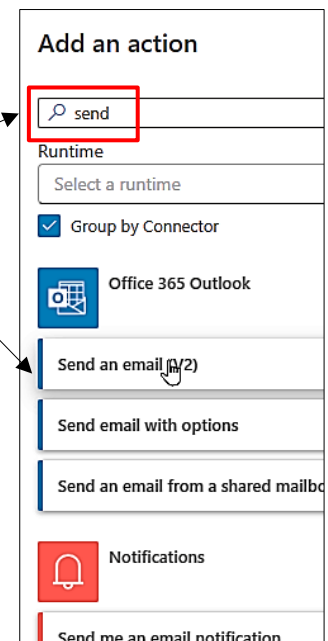

a) Type in what you want to do in part (this is by far the easiest way to choose what action you want to add).

b) Choose the action which best describes what you're trying to do.

c) You can now configure the action (here to say what the subject and body of the email you're sending will be).

d) Click anywhere on the background of your flow to return to normal view.

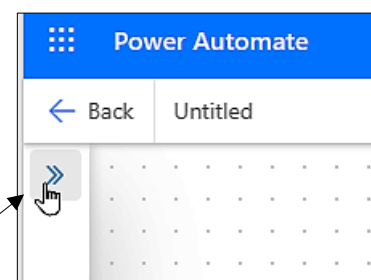

Expanding and Collapsing the Action Bar

You can show and hide the panel on the left of Power Automate showing the details of actions as follows:

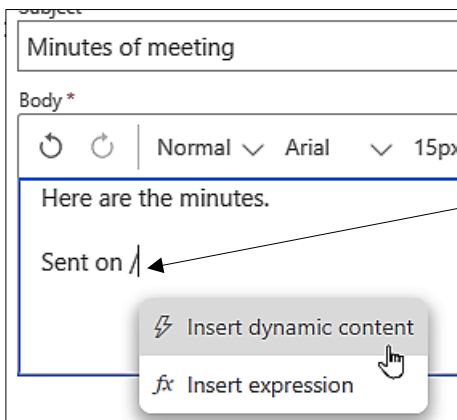

Click on this symbol to hide the side panel ...

... and on this icon (which seems to lack a tooltip) to redisplay it.

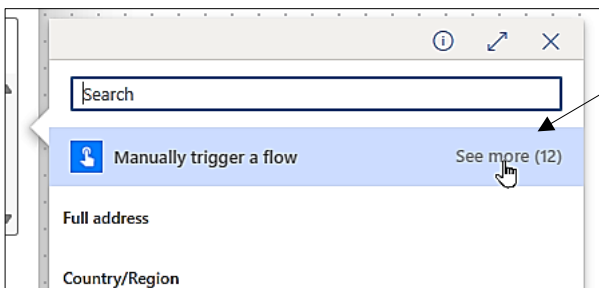

Adding Dynamic Content

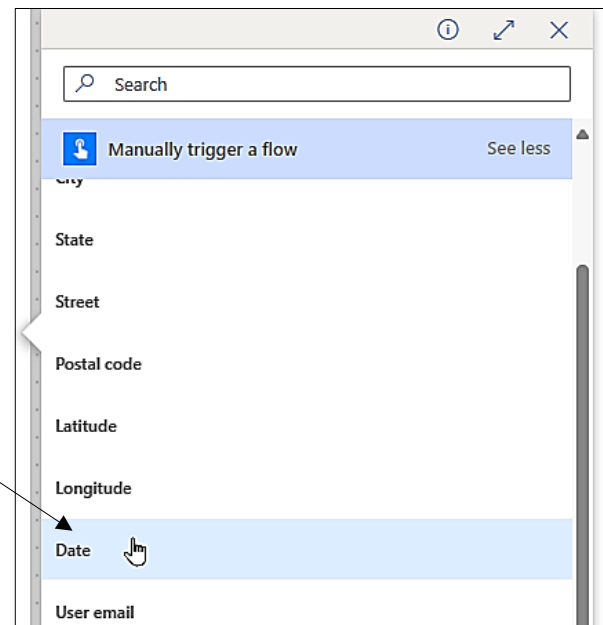

When adding a step, PA will always offer up any information that it knows about for inclusion – this is called *dynamic content*. To add this to any action:

- a) Click where you want to insert something, type a  character and choose to insert dynamic content as shown. Alternatively you can click on this symbol:

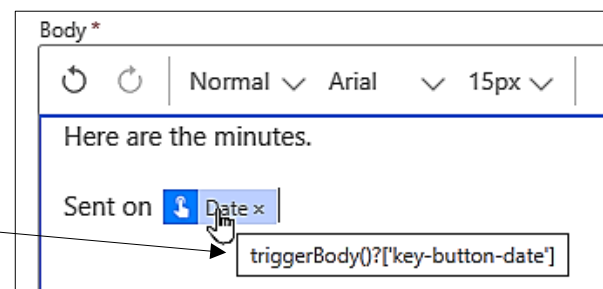

- b) If you can't see the dynamic content that you want to add, click on **See more** to see a full list of what's available.

- c) Click on what you want to add (here it's the current date). PA will add this in at your cursor position:

- d) If you want to scare yourself you could hover over the dynamic content to see the expression that PA has inserted. Much more on this later in the courseware!

Finding Parts of a Flow

These icons at the bottom left corner of the screen make it easy to find your way round your flow:

Here's what each icon does:

Icon	What it does
	Zooms in and out.
	Fits your flow to fill your current screen.
	A quick way to search for a particular action in your flow.
	Displays a map of your flow – you can use your mouse to drag round this to view different parts of your flow.

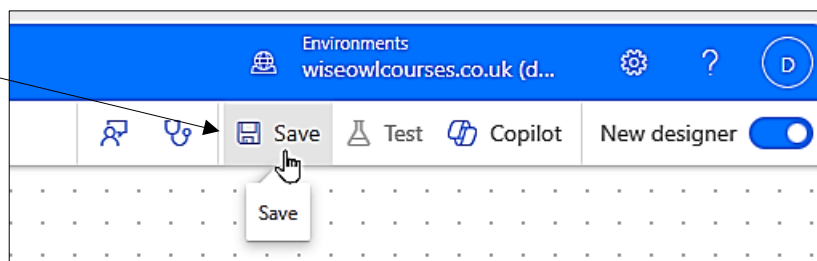

You can also hold down the **Ctrl** key and use your mouse wheel to zoom in and out, as is standard in many Windows applications.

Saving your Flow

PA will save your flow automatically at regular intervals, but you can save changes manually too:

Click on this button at the top right of your PA screen to save your current flow.

Exiting Flows

When you've finished working with a flow, here's how to leave it:

Click on this button to return to the Power Automate home screen. If you haven't recently saved your changes, you may see this message:

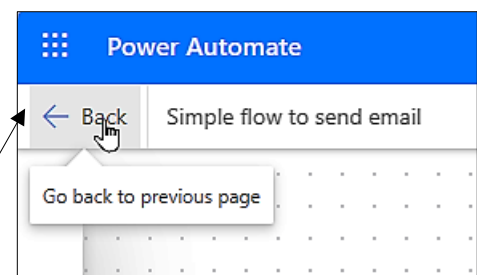

make.powerautomate.com says

If you leave this page, you will lose all changes since your last save.

Are you sure you want to leave this page?

OK

Cancel

2.2 Testing and Running Flows

Testing Flows

One way to test a flow is to do whatever triggers it (whether this be sending an email, adding a comment or whatever). However, you can also test and run instant flows as follows:

a) Click on this button to test the flow you're editing.

b) Choose to test your flow (see overleaf under re-testing flows for what **Automatically** means).

c) If your flow is using any connections to other services, you'll be asked to check that these are set up OK (here the tick means we're good to go).

d) You can now choose to run this flow.

e) When you choose to confirm that you want to run the flow as below, you'll see green ticks appearing next to each completed action:

f) Click on this button to go back into editing your flow.

g) The result of running this flow: after a short while this email will appear in your inbox, together with the delivery date we added as dynamic content.

Re-testing Flows

Once you've run a flow once, there's a different way to test it:

When you click on the button to test your flow you'll see a list of all the previous occasions on which it's run. You can choose any of these to re-run the flow using the same starting conditions.

Running Flows

Another way to run a flow is after you've saved it:

Click on this play button to run a flow from your list.

Checking Flows

The **Flow checker** button at the top right of PA allows you to see if a flow makes syntactical sense:

Click on this button to check the syntax of a flow.

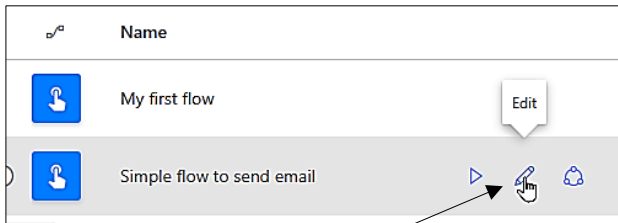

For a simple flow like our basic one it's unlikely there would be any syntax problems!

When you run a flow, PA automatically invokes the flow checker anyway, so checking flows manually probably isn't that important.

2.3 Viewing and Editing Flows

Click on the name of a flow to view it, or the pencil button to edit it:

You can click on the pencil symbol to go directly to editing the flow ...

... but if you click on the name of the flow you'll view the flow's details as shown below instead.

Here's what you'll see if you view the details for a flow:

Details about this flow (who created it and when, and what type of flow it is).

A list of the connections used by this flow.

Flows > Simple flow to send email

Only solution cloud flows with their definitions in Dataverse, can see their run history stored in Dataverse.

[Learn more](#)

Process mining (preview) Improve

A history of when the flow has been run (once only for this flow, taking less than a second and ending successfully)..

You can scroll down to see various other bits of information, depending on what type of licence you have, whether you've shared your flows and other factors.

2.4 Improving Flow Readability

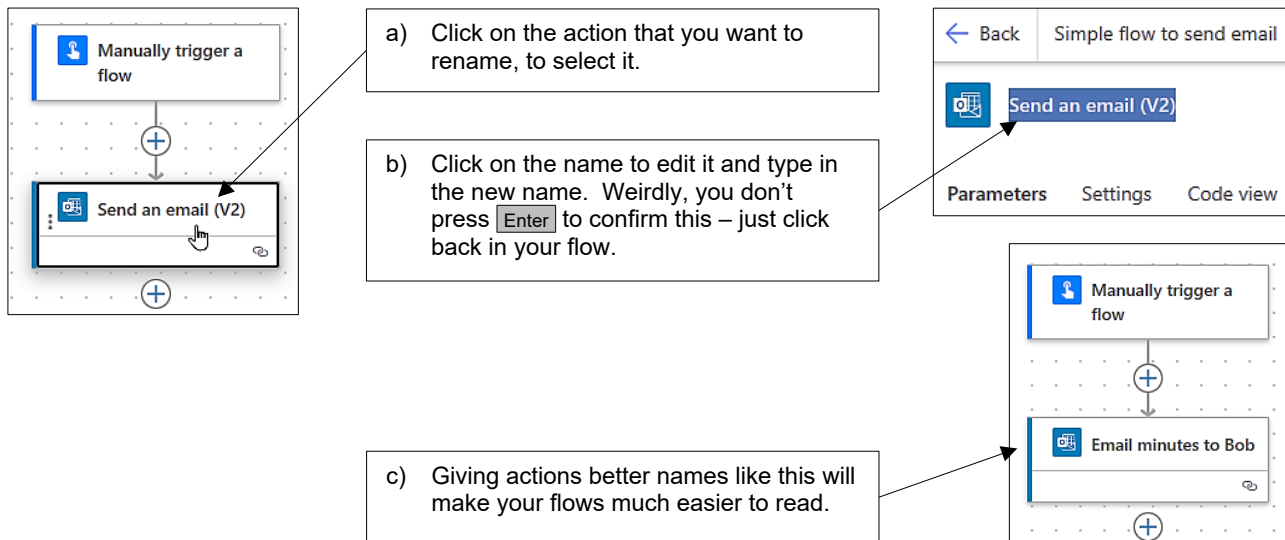

There are two ways to make your flows easier to read: renaming actions and adding *notes*.

If any users of the classic Power Automate flow designer are wondering where comments have gone – so do we! Comments are one of a few features not (yet?) supported in the new flow designer.

Renaming Actions

Renaming actions makes it easier to see what your flow is doing:

The downside of this? Many expressions that you create in PA refer to actions by name. The longer your action names are, the longer (and more cumbersome) your expression formulae will be!

Adding Notes

Notes explain what actions are doing:

If you see this symbol for an action you can hover over it to see the attached note.

To add a note to an action:

a) Click on these 3 dots and choose **Add a note** from the dropdown menu which appears.

b) Type in your note against this action.

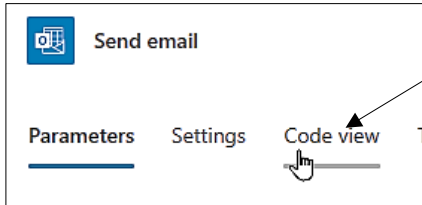

2.5 Working with Flows

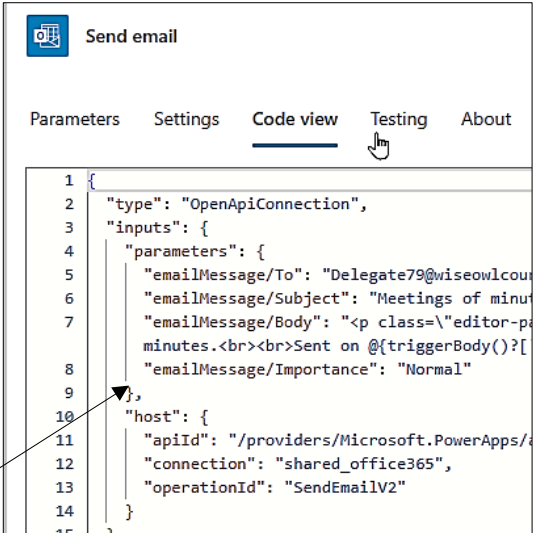

This section shows some other ways in which you can work with flows.

Viewing Actions' Code

If you want to see what an action in your flow is really doing you can view its underlying code:

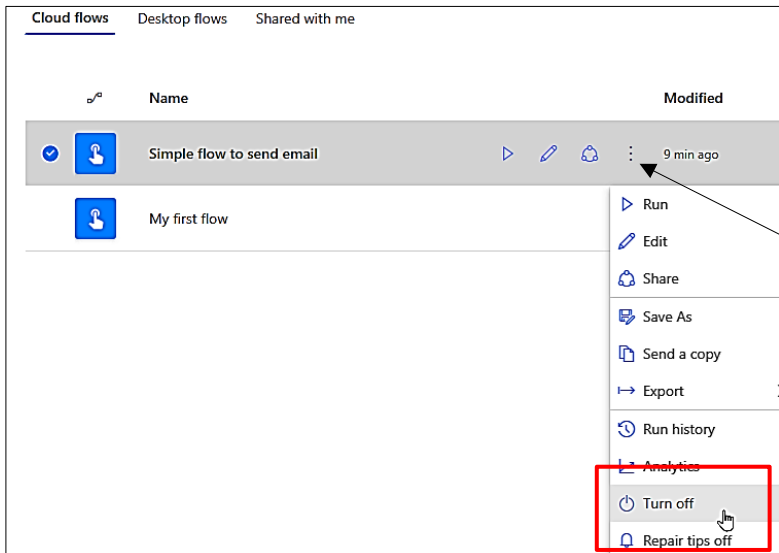

While editing an action click on this tab ...

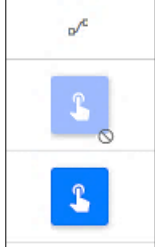

... to see the JSON underlying the action (the rest of this courseware will explain much more about this!).

Disabling Flows (but not Actions)

If you don't want a flow to run, but want to keep it in your list, turn it off:w

Click on the 3 dots next to a flow's name and choose **Turn off**. Disabled flows appear with a lighter background:

To turn a flow back on again choose the same menu option (which will now say **Turn on**).

*There is no way to disable a single action within a PA flow (more's the pity); only complicated workarounds. The main one is to use the **Testing** tab for an action to enable a static result; although this isn't covered in this courseware.*

Copying Actions

If you have an action which you may want to repeat, copy it to the PA clipboard:

a) Right-click on any action to copy it.

b) Right-click on one of the **+** symbols and choose to paste this action.

c) PA will automatically give your copied action a different name (action names must be unique within PA flows).

Copying Flows

To copy a flow, choose to save it as another name:

a) Click on the 3 dots to the right of a flow's name and choose to save it as another name.

b) Type in a new name for your flow, then choose to save this.

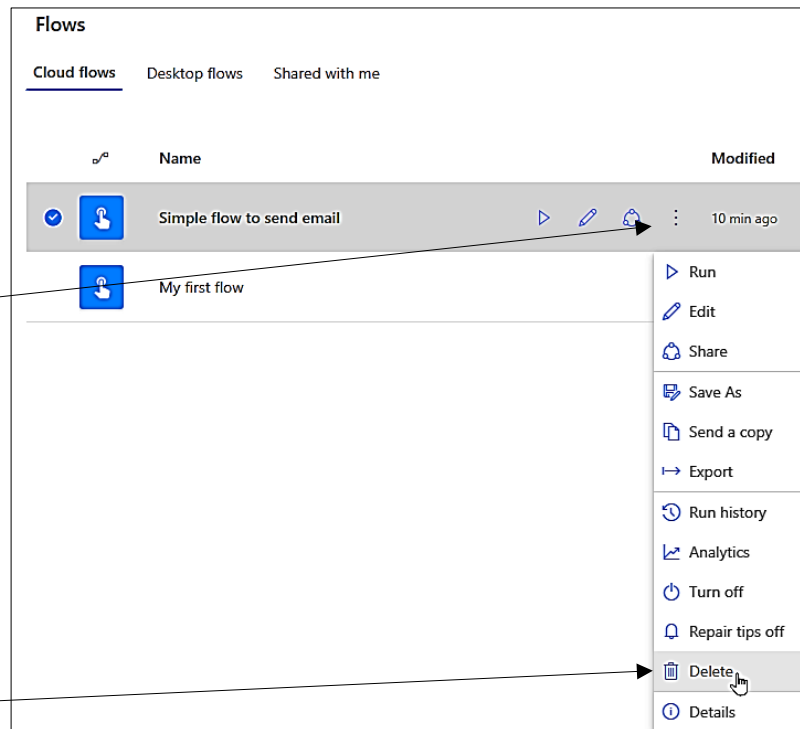

c) PA creates the copy of your original flow, and sensibly ensures it is turned off by default.

Deleting Flows

Sadly you have to delete flows one at a time (there is no easy way to select more than one flow at the same time, although see the hint below).

a) Click on the 3 dots to the right of a flow's name.

b) Choose to delete this flow.

You can connect to Power Automate Management to delete all of your flows, as described in the following Wise Owl blog, but it's not for the faint-hearted:
